

Test Case 1: Verify that there is a Login option if the user already has an existing account

Feature: Registration Page Navigation Options

Scenario: Verify that the registration page provides a login option for existing users

Given the user is on the OpenCart home page "<https://demo.opencart.com/en-gb?route=common/home>"

When the user clicks on "Account" in the header

And the user selects "Register"

Then the registration page should display a "Login" button or link

And the user should be able to navigate to the login page if they already have an account

Test Case 2: Verify that clicking on "Login" on the registration page navigates to the Login page

Feature: Registration Page Login Navigation

Scenario: Verify navigation to the login page from the registration page

Given the user is on the registration page

When the user clicks on the "Login" link or button

Then the system should navigate the user to the login page

And the login page should be displayed successfully

Test Case 3: Verify that the Login page has Email and Password fields

Feature: Login Page Field Validation

Scenario: Verify presence of Email and Password fields on the login page

Given the user is on the OpenCart home page "<https://demo.opencart.com/en-gb?route=common/home>"

When the user clicks on "Account" in the header

And the user selects "Login"

Then the login page should display an "Email" field

And the login page should display a "Password" field
